Dear Fellow Kenyans in Korea (KCK Family),

Since the website is not expected to handle heavy traffic at this stage, shared hosting is the most practical and cost-effective choice.

It will provide all the necessary functionality to run the platform smoothly while keeping operational costs low. This allows us to focus resources on building and improving the system rather than overspending on infrastructure that may not yet be needed.

If, in the future, KCK prioritizes higher speed, increased traffic capacity, or advanced performance, we can seamlessly upgrade to a dedicated hosting server. However, this comes at a higher cost, starting from approximately \$25 per month.

For now, we strongly recommend starting with shared hosting and scaling up only when the need arises. This approach ensures efficiency, flexibility, and smart use of resources.

Kind Regards,

Grace Wanjiku

General Secretary
